### DETAILED ACTION

Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 last two lines, the formation of the phase change material is vague with regard to the electrical connection as the positional relationship between the two cannot be determined from the claim. The invention requires the phase change material to be formed on the electrical connection as shown in Figs. 1 and 2I.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ovshinky et al. (Ovshinsky).

Ovshinsky teaches forming region 24, forming insulating layer 20, forming layers 32/34, forming the memory layer 36 which corresponds to the phase change material. See column 11 line 34 to column 13 line 30. The layer 24 functions as a contact would have been apparent as shown in column 12 line 1-3, or alternatively, it would have been obvious to one skilled in the art that the region such base contact would have been obvious and apparent over the corresponding region 24 and electrical connection thereto including the phase change material as shown in Ovshinsky. The cup shaped connection would have been apparent or otherwise obvious as shown in Fig. 1.

Claims 6-10 would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims and incorporating a recitation of the positional relationship discussed above regarding claim 1. The filling of the cup shaped electrical connection with an insulator in the context of claims 6-10 is not shown in the prior art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Harshfield, Dennison, Gonzalez et al., Zahorik, and Wolstentholme et al. are cited of interest.
